25X1

CLASSIFICATION

- 1. In Jaworzno (951/176); near Krakow, reinforced concrete bunkers are being made by prisoners in a forced labor camp. Reavy gravel is teach from the Oder in the vicinity of Wroclaw and shipped by rail to Jaworzno.
- 2. The bunkers are round, about 2.5 meters high and have an inside diameter of one meter. The top of the bunker is movable and detachable. The walls are 30 centimeters thick. The entrance is 70 centimeters high and 50 centimeters wide and is provided with hinged concrete doors of the same thickness of the walls and so constructed that when closed the cuter door surface is flush with the outside of the bunker. The bunkers have the usual firing slits. They are to be buried 0.5 meters in the ground.
- Piles of these bunkers have been observed at the railwoad stations at Przywory Opolskie and Groszowice. Army transports take them from there to unknown destinations;
